

## Technical Architect

Our company is seeking a Technical Architect with a background in developing Solution Architectures for a position located in the Washington, D.C. area. Compensation will be based on qualifications and experience. A full benefits package, including 401K program, will be provided.

### **Requirements:**

We seek a technical architect to join a strong technology team responsible for the implementation of high volume, high performance web services in a complex Service Oriented Architecture (SOA) environment. The candidate will be responsible for supporting the definition of the technical and operational architecture and implementation of these services. The candidate will work with business representatives to identify desired functionality and with other technical architects, leads, and developers to translate those business requirements and use cases to technical requirements and solution designs. The candidate will be responsible for functional and technical analysis as well as technical requirements and design models. The candidate will need to become a subject matter expert in the assigned functional area and support technical and QA teams through implementation and testing. The candidate will provide strong technical leadership and guidance to other technical team members and strong technical skills and communication skills are required.

Self-starter, exemplary writing and oral skills, extensive experience in multiple consulting environments, ability to lead and work well in integrated project teams

### **Desired Skills:**

- Demonstrated ability in planning for transition of legacy application architectures and technology models to future-state environments.
- Experience in the design and implementation of large OLTP information systems.
- Experience designing provable technology architectures that include hardware and software sizing and performance modeling
- Experience designing and tuning physical data architectures for performance.
- Demonstrated ability in at least three of the following areas:
  - a. Experience managing or supporting Agile implementations
  - b. Experience designing secure systems in compliance with Federal security and privacy guidelines
  - c. Experience working within a enterprise architecture framework such as Zachman or Federal Enterprise Architecture Framework (FEAF)
  - d. Experience leading design and development of XML web services
  - e. Experience leading, or previous experience implementing, Service Oriented Architecture (SOA) design
  - f. Experience producing Unified Modeling Language (UML) software design artifacts

**Qualifications:**

- Clearance with DoD or DHS major plus
- Minimum seven (7) years applied experience in specific area of technical or management consulting expertise.
- Bachelor's Degree in a recognized technical, engineering, scientific or other discipline related to area of expertise.
- Previous experience with major consulting firm major plus
- Possess excellent writing, presentation development, spreadsheet creation and work product development skills
- Must be a US Citizen

Location: Washington DC
